Robin Geral

Full-Stack Software Engineer

Lyon, France +33 6 35 52 43 28 rgeral.pro@gmail.com rdevs.fr linkedin.com/in/robin-geral github.com/rgeral

SUMMARY

From paratrooper to restaurant owner to software engineer: I pick up any stack fast, own problems end to end and stay steady under pressure. Today I lead a 6-person team while staying hands-on, designing and shipping a GDPR-compliant e-voting platform end to end. Next, I want to sharpen my technical depth in a team with a high engineering bar, where I can own meaningful product work and grow into a strong senior engineer. Based in Lyon, open to on-site days.

PROFESSIONAL EXPERIENCE

SLIB – Secure electronic voting (e-voting) solutions **Jan 2025 – Present**

Software Engineering Team Lead **Jan 2026 – Present**

Following the success of the app I built as an apprentice, SLIB created The Lab: a team of 6 junior developers I lead, shipping new applications and features in parallel with the core product teams with an AI-first workflow.

- **Built the team from scratch:** Recruited the developers from 42 School through SLIB's sponsorship partnership with the school; designed the technical test and ran every interview.
- **Trustworthy elections under GDPR:** Led the architecture and development of a new online voting platform, secure and privacy-compliant by design under strict GDPR constraints.
- **AI-first workflow:** Built AI agents, including sub-agent architectures, that automate recurring tasks and keep docs consistent.
- **Modern deployments:** Delivered a CI/CD proof of concept on Kubernetes, Helm and ArgoCD to modernize how we ship.

Full-Stack Software Engineer (Apprenticeship) **Jan 2025 – Jan 2026**

Trusted with full ownership of a new web application from day one. I picked up Angular and Spring Boot on the job, learning largely on my own, and took the app from blank page to production.

- **Architecture:** Made the core architecture decisions and proposed solutions to meet product requirements.
- **Full-stack build:** Designed and built a responsive, scalable application end to end, frontend to backend.
- **Release ownership:** Owned the release and deployment process to production.

Bill – Point-of-sale and transaction systems for restaurants **Aug 2024 – Jan 2025**

Full-Stack Software Engineer (Internship)

- **Reliable restaurant apps:** Fixed defects and shipped features on client-facing microservices apps, in Agile sprints.
- **Drive-thru wait times:** Built a standalone app from scratch to track and manage drive-thru customer wait times.

EDUCATION

42 School | Master's Degree in IT Architecture (RNCP Level 7 – U.S. Master's equivalent) **2021 – 2024**

Peer-to-peer, project-based school with no teachers: the career switch where I learned to learn on my own.

DAEU A | High school equivalency diploma, Highest Honors – Université Paris Nanterre **2019**

Left school early; earned this diploma as an adult to return to education, the first step toward tech.

BEFORE SOFTWARE: WHERE MY ENGINEERING HABITS COME FROM

Military Paratrooper | French Army, 3e RPIMa – Carcassonne, France **2020**
Infantry combat and survival training in a parachute regiment, under heavy physical and mental pressure.
What it taught me: to stay calm and methodical under pressure, and to put the mission and the team first. That is how I handle production incidents and tight deadlines today.

Co-Owner & Manager | Bar-Restaurant L'Aventure – Hautefort, France **2015 – 2018**
Ran a small business end to end (operations, finances, service) and managed a team of 4 employees.
What it taught me: to think like an owner, weighing cost, priorities and customer impact before acting. It shapes how I make product and technical trade-offs.

Shift Leader | McDonald's – Paris, France **2013 – 2015**
Progressed from Crew Member to Shift Leader; handled daily cash deposits and supervised work stations.
What it taught me: how to lead a team, train newcomers and keep a fast-paced operation running smoothly. These are the foundations I used to build and run The Lab.

PROJECTS & HACKATHONS

Chess Club – Self-hosted full-stack chess game chess.rdevs.fr
Svelte · Rust (Axum) · GraphQL · SQLite · Proxmox · WireGuard · Cloudflare · Docker · GitHub Actions
Started before my apprenticeship out of curiosity: I wanted to learn how to take an app all the way to production on my own, explore GraphQL, and build something around a game I love.

- Bought and set up my own server, then learned Proxmox, WireGuard and Cloudflare from the docs to run the full production stack myself.
- Built a GraphQL API in Rust and integrated the Stockfish engine, with difficulty tuned through skill level, think time and deliberate imperfection.

Drone Detection – European Defense Tech Hackathon (EDTH) github.com/Rgeral/hackatonParis
YOLOv8 · Python · Next.js
A weekend building for a real end user: our team of 5 worked on a drone-detection challenge for the Ukrainian armed forces. I joined to go beyond my first hackathon and ship something concrete on current technologies, and brought friends along for their first one.

- Delivered a YOLOv8s drone-detection model, a Python processing pipeline and a live-map alert dashboard in Next.js by the end of the weekend.

MetaCulture – XRPL Commons Hackathon github.com/Rgeral/MetaCulture
XRPL · React · Node.js · Predibase · Docker Compose
My first hackathon: I wanted to understand the hackathon world, meet passionate developers and, out of curiosity, get to grips with Web3, blockchain, NFTs and AI.

- Built an AI-guided art exhibition: we fine-tuned a model on an artist's writings so visitors can explore the works through the AI, with an XRPL NFT as the exhibition's finale.

Aléas – Randomized improvisation theater show · Next.js, TypeScript, DMX512 lighting

TECHNICAL SKILLS

Stack-agnostic: I pick up whatever the team uses

Languages: Java, TypeScript, Python, Rust, C/C++, SQL
Frameworks: Spring Boot, Angular, React, Svelte, Node.js
Data: PostgreSQL, MariaDB, SQLite, GraphQL
DevOps: Docker, Kubernetes, Helm, ArgoCD, Jenkins
Infrastructure: Proxmox, WireGuard, Cloudflare, GitHub Actions
Web3: Solidity, XRPL, NFTs
AI: Agentic workflows, prompt engineering, ML
Practices: Architecture, code review, Clean Code, Agile
Spoken: French (native), English
